

Ecological Information

HC 42 Radana

Water-dilutable floor stripper

Ingredients: <5% soap, <5% anionic surfactants, 5-15% nonionic surfactants, contains perfumes. Other ingredients: water-soluble solvents, alkalis.

Ecolabel	Percentage of readily biodegradable components according to OECD 301 or REGULATION on detergents	Theoretical oxygen demand	Phosphorus content (calculated as elemental phosphorus)
	93.3 %	1000 mg / g	-

Environmental impacts of the product are predominantly due to its content of surfactants, which are toxic to aquatic organisms. Together with most of the other organic components they are, however, largely degraded during the usual process time of sewage in treatment plants. Remnants eventually released into natural waters are immediately subject to further degradation processes and will soon disappear from the environment.
