

Ecological Information

L 831 Buz[®] Laundry Strong

Laundry detergent

Ingredients: <5% polycarboxylates <5% phosphonates. Other ingredients: alkalis, auxiliary agents.

Ecolabel	Percentage of readily biodegradable components according to OECD 301 or REGULATION on detergents	Theoretical oxygen demand	Phosphorus content (calculated as elemental phosphorus)
	37.9 %	30 mg / g	3.2 mg / g

Environmental impacts of the product are due to its alkalinity, which is, however, no longer relevant after sewage neutralisation.

The non-readily biodegradable components (polycarboxylates and phosphonates) precipitate during sewage treatment and get into the sludge, so that no environmental impacts are to be expected.
